Arjunnaikk

Summary

Final-year Computer Engineering student specializing in full-stack web development and blockchain applications with experience building production-ready solutions across multiple domains.

Technical Skills

Programming Languages: Java, TypeScript, Rust

Frontend Development: React.js, Next.js, Tailwind CSS

Backend Development: Node.js, Express.js, RESTful APIs, Java Servlets, JSP

Databases & Tools: MySQL, MongoDB, Cloudflare D1, Redis, TanStack Query

Cloud & Deployment : Git, Cloudflare, Vercel

Blockchain & Web3: Solana, Anchor, Smart Contracts

Education

St. Francis Institute Of Technology

Bachelor of Engineering in Computer Engineering — CGPA: 7.9/10

2022 – 2026

Mumbai, India

Shree T.P. Bhatia College of Science and Technology

Higher Secondary Certificate (HSC) — Physics, Chemistry, Mathematics

2020 – 2022

Mumbai, India

Key Projects

CoTask - Collaborative Task Management | *Next.js, Tailwind CSS, NextAuth.js, D1 SQL*

October 2024

- Developed and deployed full-stack task management application with real-time collaboration features for teams.
- Implemented secure authentication system using NextAuth.js and integrated D1 SQL database for data persistence.
- Built responsive UI with Tailwind CSS and optimized performance using TanStack Query for efficient state management.
- Designed a responsive task management interface with efficient state synchronization, enabling seamless multi-user collaboration and consistent task updates.

MeBlog - Decentralized Blogging Platform | *Next.js, Anchor, TanStack Query*

September 2025

- Developed full-stack Web3 blogging platform on Solana blockchain with Rust-based Anchor smart contracts for censorship-resistant content publishing and on-chain ownership verification.
- Implemented Program Derived Addresses (PDAs) for deterministic account generation and secure state management with smart contract validation logic enforcing business rules at the protocol level.
- Architected frontend with TanStack Query for optimized blockchain data fetching, caching, and real-time state synchronization with integrated Solana wallet adapters for transaction signing.

EzzAlgo - DSA Learning and Visualisation Website | *Next.js, GSAP, Cloudflare D1*

October 2025

- Developed a unified DSA learning ecosystem integrating dynamic algorithm visualizations for easy learning with a multi-language IDE.
- Engineered an interactive visualization module using GSAP to animate complex algorithm steps, data comparisons, and pointer movements in real-time.
- Built a comprehensive assessment and analytics module for automated MCQ scoring, student progress tracking, and a teacher administration hub for performance insights.
- Implemented a high-performance, serverless backend using Cloudflare Workers and a Cloudflare D1 (SQLite) database to ensure scalable, low-latency performance.

Work & Experience

SDAC Infotech

Aug 2024 – Jan 2025

Full Stack Development Intern

Mumbai, India

- Completed 6-month intensive internship focused on Hybrid Application Development and Enterprise Resource Planning (ERP) systems.
- Gained hands-on experience in full-stack development methodologies and enterprise software architecture.

Game Developers Guild (GDG) Committee

July 2023 – March 2024

Technical Head & Co-Founder

St. Francis Institute Of Technology

- Co-founded college technical committee and led 8-member development team in creating 3D interactive game for college fest, engaging 100+ participants during live event.
- Managed end-to-end event execution including technical setup, game hosting, and real-time troubleshooting during live event.
